CASE HISTORY

INFRA-RED TUBE HEATERS HEAT THE CITY OF AURORA, CO

Shown above are two installation sites within the City of Aurora. Please note the RE-VERBER-RAY tube heaters used in the fire station and the swimming pool applications.

PROBLEM: In early 1988 the City of Aurora, CO had decided to install energy saving gas-fired infra-red tube heaters. In years past, the City had been pleased with the results of using high intensity infra-red heaters by Detroit Radiant Products Company. However, they needed a heating system that could be direct vented and have the ability to take in fresh combustion air from the outside. A decision to try low intensity infra-red tube heaters was made. The primary decision focused upon the manufacturer and supplier of the infra-red equipment. Customer support, product quality and product flexibility were just a few of the items of concern for the City.

SOLUTION: The local representative, Infra-Red Radiant Inc., was contacted and asked to present the RE-VERBER-RAY product line by Detroit Radiant Products Company. It became clear that Detroit Radiant Products offered the most diversified line of infra-red heaters. Of particular interest were the number of enhancements that the RE-VERBER-RAY line offered. This includes: single or two-stage heating, all aluminized and titanium tubing with a high temperature coating, interlocking tubes and highly polished, rotatable reflectors. This would allow flexibility for the various applications that the City wished to heat.

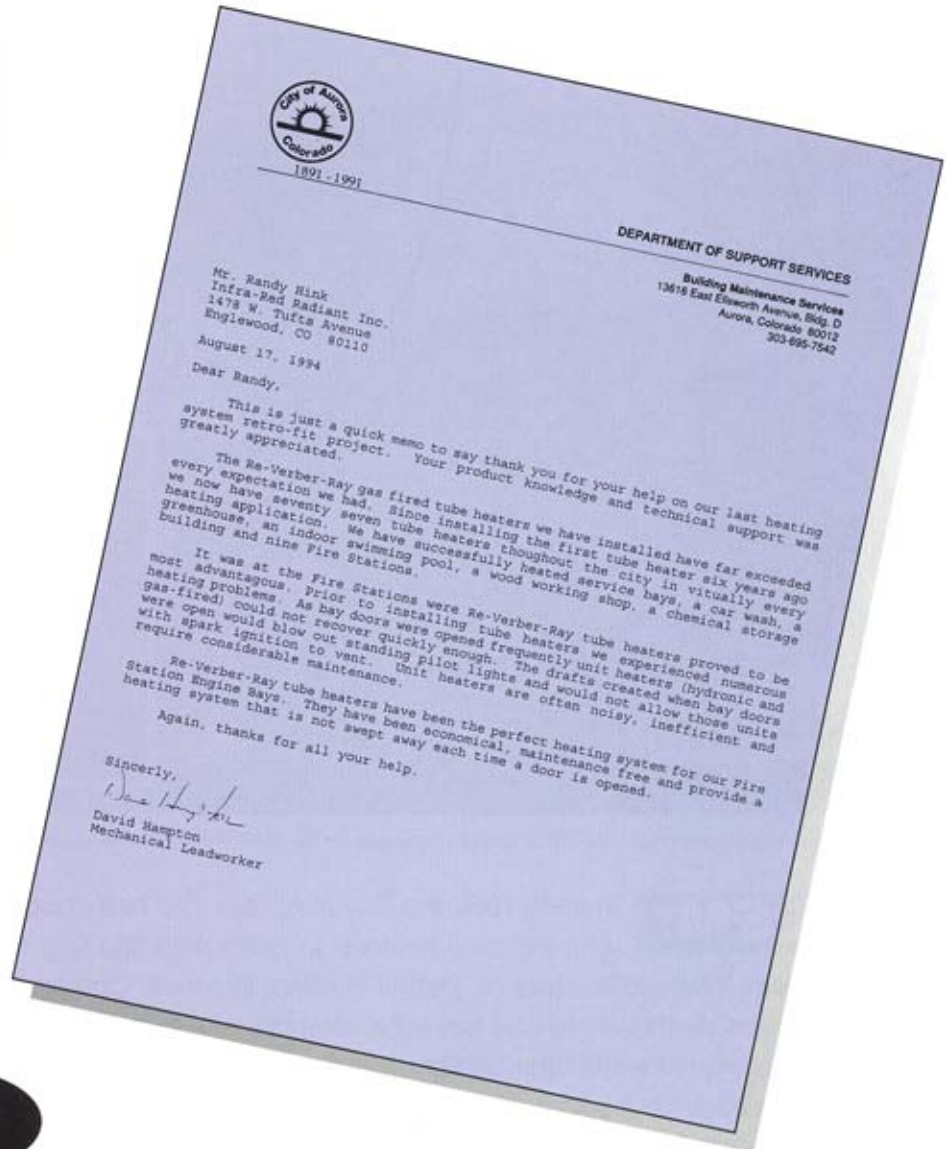

DETROIT RADIANT PRODUCTS

TUBE HEATERS

"We have successfully heated service bays, a car wash, a greenhouse, an indoor swimming pool, a woodworking shop, a chemical storage building and nine fire stations."

RE-VERBER-RAY offers the most diversified line of Infra-red tube heaters. This includes the HL, DX, DRV, DBS, DTH and DTHS Series

RESULTS: As shown in the letter below, the City of Aurora has had tremendous success using RE-VERBER-RAY tube heaters. These heaters have been installed in virtually every application throughout the City. With over seventy heaters currently in use, the RE-VERBER-RAY tube heaters have exceeded all of the City's expectations.
